- Cimena4d 3d modeller

2011-2013
Garuda Indonesia | Jakarta

Intern Network Engine

- Visited clients to develop, update and maintain host integration per project's spec.

Dear Hiring Manager,

With over 12 years of dedicated experience in web technology development within the banking and financial sectors, I have cultivated a profound expertise in delivering customized software solutions. My career has been significantly shaped by my tenure at Cittservices LLC, a Dallas-based company renowned for its bespoke solutions for brokerage firms.

At Cittservices, I was instrumental in evolving the company's offerings by specializing in full-stack development. My proficiency spans from crafting intuitive front-end experiences using WordPress and Vue3 to building robust back-end systems with Laravel and Node.js. This duality enabled me to lead the company's transition into a brokerage entity, where I developed both front and back-end infrastructure, enhancing operational efficiency and client satisfaction.

In addition to programming, I provided customer support to Cittservices' clients, including Titanfx, Liquidity Connect, Baxiamarkets, and Funded Prop Bx, for over 11 years. This experience helped me develop a deeper understanding of client needs, while also sharpening my communication and problem-solving skills in high-pressure environments.

Deployment and Integration: I utilized Docker and Docker Compose to deploy our applications, ensuring scalability, isolation, and efficient resource management. Additionally, I implemented n8n to support the marketing team's CRM, ensuring that their data matches seamlessly with the backend, thus improving data consistency and marketing operations.

Recent Personal Project: I recently developed damaikasihchannel.com, a website using the Jekyll static site generator, deployed with Cloudflare's tech stack. The site features holy Bibles, church documents, articles, and more, with the core functionalities developed in less than 7 days, showcasing my ability to deliver high-quality projects quickly.

My technical journey includes:
· Front-End Development: Creating responsive, secure, and user-friendly interfaces.
· Back-End Development: Architecting scalable and secure server-side solutions.
· System Integration: Ensuring seamless operation between different software components to support business growth.

I am eager to bring my background in financial technology, my problem-solving skills, and my passion for innovation to new challenges where I can contribute to the success and digital transformation of your organization. I believe I have a lot more room to grow, and I am committed to continuous learning and development.

Thank you
Best Regards
Agustinus Biotamalo Lumbantoruan
